

Program Name: Endangered Species

Grade: Seventh

Objective: The student will investigate and understand basic concepts related to human food production and its affect on the ecosystem.

Description: Students will compare and contrast various population disturbances that threaten species survival. Students will also observe the effects of human interaction in local ecosystems and collect, record, chart, and interpret data concerning the effect of interaction (from observations, print, and electronic resources).

Activities & Resources:

Teacher resource notebook with lesson plans

Activities: Critter Corner

Resources: Nonpoint source pollution and you, these brochures are for distribution.
